

WESTERN POWER FOCUSES ON FIRE SAFETY

Client Profile

Western Power is a Western Australian State Government-owned corporation responsible for building, maintaining and operating an electricity network, which connects 2.3 million customers to traditional and renewable energy sources.

The Problem

The utility giant needed to access a range of terrains in urban and rural locations with a trailer that could be attached to an existing fleet of fire fighting vehicles as a quick response to small fires during onsite repairs.

The Solution

Coerco custom-designed and fabricated a steel chassis and axle trailer to suit a water tank that's orientated to fit onto a narrower chassis with a pump and a hose reel.

The design incorporates a tandem axle that has been designed to maximise stability and weight distribution for easy access to differing terrains like sand and gravel, and easy maneuverability in urban areas.

Western Power Geraldton Field Operations Team Leader, John Simpson said the units were an ideal solution for the electrical servicing giant.

"Western Power crews love the new units for their ease and efficiency. Before, our crews had to take the fire-fighting units on and off the trailers depending on the season. Now, we have a purpose-built unit we can hook on the back and away we go," Mr Simpson said.
